

April 6, 2018

The Honorable Rodney P. Frelinghuysen
Chairman
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Nita Lowey
Ranking Member
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Tom Cole
Chairman
Appropriations Subcommittee on Labor,
Health and Human Services, Education and
Related Agencies
U.S. House of Representatives
Washington, DC 20515

The Honorable Rosa DeLauro
Ranking Member
Appropriations Subcommittee on Labor,
Health and Human Services, Education and
Related Agencies
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Frelinghuysen, Ranking Member Lowey, Chairman Cole, and Ranking Member DeLauro:

The undersigned organizations, as supporters of the Friends of National Institute of Dental and Craniofacial Research (FNIDCR), respectfully request that as you and your colleagues draft the Labor, Health and Human Services, Education and Related Agencies appropriations legislation for fiscal year (FY) 2019 that you fund the National Institutes of Health (NIH) at **at least \$39.3 billion**, including funds provided to the agency through the 21st Century Cures Act for targeted initiatives, and the National Institute of Dental and Craniofacial Research (NIDCR) at **\$492 million**.

NIDCR, founded in 1948 to address shortfalls in military readiness due to recruits' poor oral health, is now the largest institution in the world dedicated exclusively to research to improve dental, oral and craniofacial (skull and face) health. Over the years, the Institute's portfolio has expanded, and oral health researchers' discoveries, innovations and public health initiatives, including fluoride in water, toothpaste and varnish and dental sealants, have led to a precipitous drop in tooth decay among children and resulted in more Americans keeping more of their teeth for longer.¹ Since the 1950s, estimates reveal that the **total federal investment in NIH-funded oral health research has saved the American public at least \$3 for every \$1 invested.**²

This year marks NIDCR's 70th anniversary. Yet, even with the Institute's myriad contributions to citizens' oral and overall health, oral diseases and conditions remain a prevalent and costly part of our society, and troubling disparities still persist. For example, cavities, though largely preventable, remain the most common chronic condition of children (aged 6 to 11) and adolescents (aged 12 to 19), and oral disorders are the seventh greatest health expenditure among U.S. adults. Furthermore, Hispanic and non-Hispanic black children are more likely to suffer from untreated dental caries.³ At a macro level, in 2017 the United States spent more than \$129 billion on dental and oral health care and recent projections suggest that annual U.S. spending on dental care will reach \$192 billion by 2026.⁴

Our society benefits when we capitalize on dental, oral and craniofacial research – both in terms of cost savings and overall well-being – and sufficient federal funding will allow NIDCR to continue addressing the nation's most pressing public health issues in order to create a healthier future. Right now, NIDCR-funded researchers are actively combatting the dual crises of opioid abuse and chronic pain by researching prescription drug decision-making and pain biology and management. The Institute has also made strategic investments in regenerative medicine to replace bone and oral tissues lost or damaged by cancer and other diseases or trauma, as well as investments aimed at eliminating oral health disparities by supporting projects that investigate their social, behavioral and genetic underpinnings. Additionally, NIDCR is fortifying the future of the field by training a diverse workforce that harnesses the talents and potential of the U.S. population.

The funding requested by the Friends of NIDCR for FY 2019 will allow this Institute to support the best science; conduct research that will move us toward precision health care and help overcome health disparities; and ensure a strong health research workforce dedicated to improving dental, oral and craniofacial research. Since its inception through the present, NIDCR has been improving the health of our nation, reducing the societal costs of dental care and providing us with the evidence base needed to improve care. Increasing funding for NIDCR is the optimal way to ensure its life-changing and cost-saving initiatives and innovations continue.

We look forward to working with you to ensure the highest possible funding level for NIDCR is enacted this year. We greatly appreciate your leadership thus far to make this a reality and hope to see your continued support for NIH and NIDCR in FY 2019 spending legislation.

Thank you for considering our recommendations. If you have any questions or require additional information, please contact Lindsey Horan at lhoran@aadr.org.
